

// Technical Proposal + Pricing

AI Product Video Automation

PHASE 1 Script Generation → AI Video → Social Publishing

PREPARED FOR	DATE	DOCUMENT TYPE	STATUS
Giovanni / SERAMAN	10 June 2026	Technical Proposal + Pricing	Ready for Review

— 01 — OVERVIEW

What This Proposal Covers

SERAMAN currently produces product explanation videos by manually briefing a freelancer for each product — scripting the Italian voiceover, assembling product images, and posting to each platform individually. For a growing product catalog, this cycle repeats every time a new item is added. Phase 1 replaces the entire manual process. Giovanni submits Italian product text and photos once. The pipeline handles script generation, AI video production with Italian audio, video assembly, and publishing to all four social platforms — automatically, every time.

— 02 — THE PIPELINE

How the System Works — End to End

- 01

INPUT INTAKE

Giovanni fills a simple form with the Italian product description and uploads product photos. n8n receives the submission instantly and starts the pipeline. No emails. No briefing calls.

Tally Formn8n
- 02

SCRIPT GENERATION

Claude takes the raw Italian product text and rewrites it as a natural spoken script — correctly paced for 60 to 90 seconds. The language stays Italian. Technical spec language gets simplified into how a person actually talks about the product. Scene descriptions are generated alongside the narration to guide the video generation step.

Claude API n8n
- 03

AI VIDEO GENERATION

n8n sends the Italian script and product photo URLs to Kie AI via REST API. Veo 3.1 — Google's latest video model — generates cinematic product footage: each segment shows the product from a different angle or use context, matched to the narration. Italian audio is generated natively inside the video, synchronized from the start. No separate voiceover step. Rendering takes 3 to 8 minutes per segment. n8n polls the job status until all segments are complete.

Kie AI (Veo 3.1)n8n
- 04

VIDEO ASSEMBLY

n8n sends the generated segments to Rendi — a cloud-based ffmpeg API — for final assembly. Rendi concatenates the segments, adds Italian captions, applies a consistent SERAMAN intro and outro, and exports the final MP4 in vertical 9:16 format for Reels, TikTok, and Shorts. No local software or server required. Rendi runs entirely in the cloud and returns the finished file to n8n.

Rendin8n
- 05

APPROVAL GATE

Before anything publishes, Giovanni receives one email with a preview link and two options: APPROVE or REQUEST CHANGES. If approved, n8n continues automatically. If changes are needed, Giovanni replies with notes and the relevant segment is regenerated. This is the only point in the pipeline that requires Giovanni's attention.

n8nEmail
- 06

SOCIAL PUBLISHING

On approval, n8n passes the finished MP4 to Blotato with an Italian caption and hashtags. Blotato publishes simultaneously to Instagram Reels, TikTok, YouTube Shorts, and Facebook. All four platforms receive the video in a single API call.

Blotato APIInstagram ReelsTikTokYouTube ShortsFacebook
- 07

DELIVERY NOTIFICATION

Giovanni receives an automatic notification confirming the video is live, with direct links to each published post. The whole process runs without any manual input after the initial form submission and approval.

What Happens When Something Goes Wrong

Every automated pipeline has failure points. Here is how each one is handled.

- ✔

Kie AI rendering delay. n8n polls the render status every 30 seconds, up to 25 attempts. If a segment takes longer than expected, the pipeline waits cleanly — it does not fail or lose the job. Partially completed segments are held until all are ready before assembly begins.
- ⚙️

Social platform post failure. Blotato has built-in retry logic and failure alerts. If one platform rejects the upload, the others still publish. Giovanni gets notified of any failure with the specific reason.
- ✔️

Missing or incomplete input. The intake form requires all fields before submission. n8n validates that photos and text are present before calling any API. Incomplete submissions are rejected at the gate with an automatic reply to Giovanni.
- ⚠️

API credential expiry. Kie AI, Rendi, and Blotato credentials are stored in n8n environment variables. If a key expires, n8n logs the error and sends an alert — the pipeline pauses cleanly instead of failing silently.

— 03 — SCOPE

What I'll Build

VIDEO GENERATION TOOL — WHY KIE AI

TOOL	PRICING	FORMAT	N8N API	VERDICT
Kie AI (Veo 3.1)	\$0.40–2.00 per segment	Cinematic + native audio	REST API	Selected
HeyGen	\$29–89/mo subscription	Talking head avatar	REST API	High cost, wrong format
Runway ML	\$1–3 per segment	Image-to-video	REST API	Less stable for product work

SOCIAL PUBLISHING TOOL — WHY BLOTATO

Four tools were evaluated for the social publishing layer. Blotato was selected for its native n8n integration, flat-rate pricing with no per-post fees, and an MCP server that works directly with the Claude layer already in the stack. Getlate is a strong alternative at lower cost if Giovanni prefers to minimize monthly overhead after delivery.

TOOL	PRICE	N8N INTEGRATION	PER-POST FEES	VERDICT
Blotato	\$29/mo flat	Native + MCP server	None	Selected
Getlate	Free–\$19/mo	Official n8n node	None	Strong alternative
Upload-Post	\$16/mo	HTTP node	None	Budget option
Buffer	\$5/channel/mo	Node, rate-limited	None	Not recommended

CHANNELS IN SCOPE

CHANNEL	CONTENT TYPE	STATUS
Instagram Reels	Vertical video 9:16	In scope
TikTok	Vertical video 9:16	In scope
YouTube Shorts	Vertical video 9:16	In scope
Facebook	Video post	In scope

INTENTIONALLY DEFERRED

FEATURE	REASON
Caption translation to other languages	Phase 2
Custom avatar cloned from SERAMAN representative	Phase 2
A/B testing of video styles or backgrounds	Phase 2
Video performance analytics dashboard	Phase 2

These can be added in Phase 2 once the core pipeline is running and Giovanni has confirmed the output quality meets brand standards.

— 04 — TIMELINE

Milestone Breakdown

- WEEK 1

Pipeline Foundation
 - n8n workflow built and connected to Tally intake form
 - Claude script generation prompt built and tested in Italian
 - Kie AI API connected — first test video generated from a real product description and photos
 - Rendi assembly workflow built — segments concatenated, captions applied, vertical format output

Checkpoint — Test video generated from a real SERAMAN product. Giovanni reviews video quality, Italian narration, captions, and format. Approval gate tested end to end.

- WEEK 2

Publishing and Delivery
 - Blotato API integrated — all four platforms connected
 - Full end-to-end test: form submission through to published video
 - Error handling and retry logic added to all pipeline steps
 - Delivery notification live via email

Checkpoint — Full pipeline live. Giovanni submits a real product and receives published video links across all platforms within 15 minutes of approval. Walkthrough call included.

— 05 — ONGOING COSTS

Ongoing Platform Costs

Ongoing platform costs paid by Giovanni after delivery: Kie AI pay-per-use (approximately \$3–20 per finished video depending on length and quality tier), Rendi \$25/mo Pro, Blotato \$29/mo, n8n Cloud ~\$20/mo or self-hosted free. Total infrastructure: approximately \$60–90/mo at standard volume, plus per-video generation cost.

SERVICE	MONTHLY ESTIMATE
Kie AI (video generation)	\$0.40–2.00 per 8-second segment (pay-per-use)
Rendi (video assembly)	\$25/mo Pro — cloud ffmpeg, up to 400GB/mo
Blotato (social publishing)	\$29/mo flat
n8n Cloud (orchestration)	~\$20/mo or self-hosted free
Tally (intake form)	Free tier sufficient

— 06 — INVESTMENT

Investment

Complete automation pipeline delivered in 2 weeks	\$600	Phase 1 — Build
Build plus 30 days of post-delivery support	\$800	Phase 1 + Support

After delivery, ongoing video production costs scale with volume. At 10 videos per month (standard), total platform cost stays under \$100/mo.

PAYMENT TERMS

50% upfront to begin. 50% on delivery of the working pipeline. Payment via Fiverr milestone.

— 07 — NEXT STEP

What I Need From You

- ☐ Kie AI account — free to register, credits loaded as needed (no monthly subscription required)
- ☐ Rendi account — \$25/mo Pro plan for cloud video assembly
- ☐ Blotato account (\$29/mo — Giovanni registers and shares API key)
- ☐ Instagram Business, TikTok Business, YouTube channel, and Facebook Page connected to Blotato
- ☐ Italian product texts for first 3 test products
- ☐ Minimum 3 product photos per product for initial testing
