// Technical Proposal + Pricing

Petit Lit Furniture: Website Redesign

PHASE 1 Homepage + Product Presentation + Trust Layer

PREPARED FOR	DATE	DOCUMENT TYPE	STATUS
[Name]	10 July 2026	Technical Proposal + Pricing	Ready for Review

— 01 · OVERVIEW

What This Proposal Covers

Right now, the first thing a parent sees on petitlitfurniture.com is two sold-out products. Before they read a product name, before they check a price, they see 'Sold Out.' Most leave. You have 29 products available but the homepage isn't showing them. A few other things compound this. Some products show a $0.00 price, which looks like a site error to a customer. Product names like KIDDIEBUNK52 read as internal warehouse codes, not something a parent shopping for a 4-year-old can interpret in two seconds. There are no dimensions, no materials listed, no safety information — the things a parent checks before spending $400 to $600 on a bed for their child. Phase 1 fixes the homepage, the product presentation, and plugs the gaps that are turning away buyers who were already ready to purchase.

— 02 · THE PIPELINE

What Gets Fixed — Step by Step

01 **HOMEPAGE REBUILD**

The two sold-out products currently featured above the fold get replaced with your strongest in-stock items. A clean opening section goes in that tells a parent in 5 seconds what Petit Lit sells, that you are in Brooklyn, and why you are worth trusting. Return policy and contact details move up from the footer.

`Shopify Theme Editor`

02 **PRODUCT NAMING + PRICING FIX**

All 29 products get renamed to plain English customer-facing names. KIDDIEBUNK52 becomes something a parent can read and understand without guessing. Every $0.00 pricing issue gets corrected at the same time.

`Shopify Admin`

03 **PRODUCT PAGE IMPROVEMENTS**

Room dimensions get added clearly to every product page. Parents always need to know if it fits before they buy. A materials and safety information section goes in below the product description. Customer reviews get enabled so parents can read what other parents say.

`Shopify Theme Editor` `Shopify Reviews`

04 **SOLD-OUT CAPTURE**

Every sold-out product page currently ends in a dead end. We replace that with a simple email capture: notify me when this is back in stock. Six products are sold out right now. Those are warm buyers. This stops them from disappearing permanently.

`Back In Stock App` `Shopify`

05 **MOBILE REVIEW + FIXES**

Full audit of the site on mobile viewports. Most parents browse on their phones. Navigation, product grid spacing, and tap targets get reviewed and fixed where they are breaking or hard to use.

`Shopify Theme Editor` `Chrome DevTools`

The Buyers You Are Currently Losing

Six products are sold out right now with no way for interested customers to come back. These are not cold leads. They clicked, they found the product, they wanted it.

- ✓ **Every sold-out page captures the buyer's email.** Instead of a dead end, they see a simple field: tell me when it is back. They enter their email and move on.
- ● **When you restock, they get notified.** The notification fires automatically. You do not touch anything. The buyer comes back already knowing what they want.
- △ **This is included in Phase 1.** The manual capture is part of this scope. The fully automated email flow with abandoned cart sequences is the optional add-on.
- ■ **These are your warmest buyers.** They already decided to purchase. Getting them back costs nothing beyond the setup already included here.

— 03 · SCOPE

What I'll Build

WHAT IS INCLUDED IN PHASE 1

Everything below is in scope. Nothing hidden. If something comes up during the work that needs a decision, we pause and check before proceeding.

ITEM	WHAT IT FIXES	INCLUDED
`Homepage rebuild`	Sold-out featured products, hero section, trust signals	Yes
`Product renaming (all 29)`	Internal codes replaced with readable names	Yes
`$0.00 pricing fix`	Broken price display on affected products	Yes
`Product page improvements`	Dimensions, materials, safety info, reviews enabled	Yes
`Sold-out email capture`	Buyers captured instead of lost when product is unavailable	Yes
`Mobile audit and fixes`	Navigation, grid, tap targets on phone viewports	Yes

WHAT IS NOT IN THIS PHASE

Keeping scope clean is how projects stay on time and on budget. The following are real opportunities but they belong in a separate conversation after Phase 1 is live.

ITEM	WHY IT IS DEFERRED
`SEO optimization`	Needs Phase 1 content foundation first
`Paid ads and Google Shopping feed`	Homepage needs to convert before driving paid traffic
`Blog or editorial content`	Not a primary conversion blocker right now
`Wholesale or trade portal`	Separate scope, separate timeline

INTENTIONALLY DEFERRED

FEATURE	REASON	
S	E	O keyword optimization
G	o	ogle Shopping product feed
B	l	og or editorial content
P	a	id advertising integration
W	h	olesale and trade buyer portal

These are real opportunities. None of them make sense to build before Phase 1 is live and converting.

— 04 · TIMELINE

Milestone Breakdown

DAYS 1-2 **Homepage Live**

- Sold-out products removed from featured section
- In-stock items featured above the fold
- Hero section and trust signals in place

`Checkpoint — You review the homepage and confirm it looks right before we move to products.`

DAYS 3-5 **Products Fixed**

- All 29 products renamed to customer-readable names
- $0.00 pricing corrected across the catalog
- Dimensions, materials, and safety info added to product pages
- Customer reviews enabled

`Checkpoint — You review 3 to 4 product pages and confirm the information is accurate.`

DAYS 6-7 **Capture + Mobile**

- Back-in-stock email capture live on all sold-out pages
- Full mobile audit complete
- Navigation and tap targets fixed where broken

`Checkpoint — Test on your own phone and confirm it works how you would expect.`

DAYS 8-10 **Final Polish + Handoff**

- Cross-device testing complete
- Any last fixes from your review applied
- Short walkthrough of what changed and how to manage it going forward

`Checkpoint — Final sign-off. Second payment released.`

— 05 · ONGOING COSTS

Ongoing Platform Costs

No new platform costs are introduced in Phase 1. The back-in-stock capture uses a free tier app available in the Shopify App Store. Your existing Shopify subscription covers everything else. If you add the automation add-on, there may be a small monthly cost for the email tool depending on subscriber volume. We confirm the exact number before setting anything up.

SERVICE	MONTHLY ESTIMATE
`Homepage rebuild`	$200
`Product naming and pricing fix (all 29 products)`	$150
`Product page improvements (dimensions, safety info, reviews)`	$200
`Sold-out email capture`	$100
`Mobile audit and fixes`	$150

— 06 · INVESTMENT

Investment

Phase 1 — Core Redesign	**$800**	**Homepage + Products + Trust Layer + Mobile**
Phase 1 + Automation Add-On	**$1,150**	Everything above, plus automated back-in-stock emails and abandoned cart recovery

One parent who stays and buys a bed at $450 to $599 instead of leaving pays for this entire project. Phase 1 is designed to recoup its cost in the first week it is live.

PAYMENT TERMS

50% upfront to begin work. 50% on delivery and your approval. Shopify collaborator access is all we need to start. No passwords required.

— 07 · NEXT STEP

What I Need From You

- ☐ Shopify collaborator access. We send a request through Shopify and you approve it. No passwords shared.
- ☐ Confirm which sold-out products are temporarily out of stock versus permanently discontinued.
- ☐ Product dimensions and materials for any products that do not have them recorded anywhere.
- ☐ Brand assets if available: logo file, preferred colors or fonts. If none exist, we work with what is on the current site.
