Automated Social Media Content System

PHASE 1 | AI Content Generation + Telegram Approval + LinkedIn & Instagram Publishing

PREPARED FOR

Revamp Consulting LLC

DATE

18 July 2026

DOCUMENT TYPE

Technical Proposal + Pricing

STATUS

Ready for Review

01 · OVERVIEW

What This Proposal Covers

Revamp Consulting publishes strategy content across LinkedIn and Instagram. Right now, every post is a manual decision: choose a topic, write the copy, post to both platforms. Do that every day and it becomes a real time cost — time that competes directly with client work and strategy delivery.

The other problem is consistency. LinkedIn and Instagram both reward accounts that post on a reliable schedule and suppress accounts that go quiet. When publishing depends on someone having bandwidth that day, gaps appear. Gaps cost reach and visibility.

This system removes both problems. At 9AM every morning, a strategy post is generated automatically, sent to one person for a quick Telegram review, and published the moment they approve. One decision per day. Everything else runs itself.

02 · THE PIPELINE

How the System Works — End to End

01 DAILY TRIGGER

n8n fires at 9:00 AM every morning. It selects a content topic from Revamp's 9 focus areas — strategy case studies, leadership, disruption, succession planning, and five others — on a rotating schedule. No manual input required to start the day's content.

n8n Cron Node

02 CONTENT GENERATION

Groq API (Llama 3.3 70B, free tier) generates a 75-word business strategy post matched to the selected topic. A CTA relevant to the post type is appended, pointing to revampconsult.com. The free tier supports 14,400 generations per day — at one post daily, this system runs at less than 0.01% of available capacity.

Groq API Llama 3.3 70B Free Tier

03 TELEGRAM REVIEW

The generated post is sent to the designated approver on Telegram. Three options are available: approve and publish, send an edited version of the text, or request a fresh generation on the same topic. The system holds and waits for a human decision — nothing goes live without it.

Telegram Bot n8n

04 EDIT LOOP

If the approver sends back a revised version of the text, n8n receives it, displays it back for one final confirmation, then publishes the edited version. The approver stays in full control of the final wording without needing any other tool.

Telegram Bot n8n

05 PUBLISHING

On approval, Upload-Post sends the final content to LinkedIn and Instagram simultaneously via their official APIs. Each platform receives the post in the correct format. The workflow logs the result and resets for the next morning automatically.

Upload-Post LinkedIn API Instagram Graph API

Control Stays With You

Automated content systems raise one legitimate concern: what if something posts that shouldn't.

- Nothing publishes without approval. The pipeline holds at the Telegram step until the approver responds. Silence does not trigger publishing. If no action is taken that day, nothing goes out — the system waits until the next morning.
- Full edit control inside Telegram. The approver can rewrite any part of the post directly in the chat. The system receives the edit, confirms it with the approver, then publishes that version — not the AI original.
- Topic rotation prevents repetition and drift. Content cycles through Revamp's 9 defined focus areas on a fixed schedule. The AI generates within that framework only — it cannot go off-topic or repeat last week's subject.
- Free tier with zero rate limit risk. Groq's free tier allows 14,400 generations per day. At one post daily, this system uses 0.007% of available capacity. There is no throttling, no overage cost, and no service interruption from usage volume.

03 · SCOPE

What I'll Build

PHASE 1 — COMPLETE SCOPE

Everything below is built, tested, and delivered in Phase 1. Nothing is deferred to a future upgrade.

COMPONENT	WHAT IT DOES	STATUS
n8n Automation Workflow	Full pipeline orchestration from 9AM trigger to published post	Phase 1
Groq API Integration	Free-tier AI content generation — strategy posts in Revamp's voice	Phase 1
Telegram Approval Bot	Approve, edit, or regenerate — all from Telegram, no other tool needed	Phase 1
Content Topic Rotation	9 strategy focus areas cycling on a fixed schedule, no repetition	Phase 1
CTA Selection Logic	Relevant CTA per post type, linking to revampconsult.com	Phase 1
LinkedIn Publishing	Official API via Upload-Post, correct format every time	Phase 1
Instagram Publishing	Official API via Upload-Post, correct format every time	Phase 1

CHANNELS IN SCOPE

CHANNEL	CONTENT TYPE	STATUS
LinkedIn	75-word strategy post, text only	Built — Phase 1
Instagram	75-word strategy post, text only	Built — Phase 1

INTENTIONALLY DEFERRED

FEATURE	REASON
Image generation	AI-generated branded images per post. Available as a Phase 2 add-on once the base system is live and the posting cadence is established.
Multi-person approval	Phase 1 routes to one Telegram approver. Team review workflow is a Phase 2 configuration.
Analytics and reporting	Post performance tracking is out of scope for Phase 1.
Multiple posts per day	Phase 1 publishes once daily at 9AM. Higher frequency is a Phase 2 adjustment.

Phase 1 gets the system live and publishing consistently. Phase 2 layers in images, team approval, and analytics once the base workflow is proven.

04 · TIMELINE

Milestone Breakdown

WEEK 1 Build and Integration - Set up n8n workflow with 9AM cron trigger and topic rotation across 9 content areas - Integrate Groq API with content prompt tuned to Revamp's voice, topics, and 75-word limit - Build Telegram bot with approve, edit, and regenerate flow - Wire CTA selection logic with revampconsult.com contact form link - End-to-end test: cron fires, post generated, Telegram message delivered, edit loop confirmed working Checkpoint — Full workflow runs from trigger through Telegram approval without errors. Generated content matches Revamp's 9 topic areas and voice standard.	WEEK 2 Publishing Layer and Handoff - Connect Upload-Post API to LinkedIn and Instagram publishing nodes - Live test: approve a post in Telegram and confirm it appears on both platforms within 60 seconds - Verify edit loop end-to-end: send revised text, confirm edited version publishes correctly - Document the system: how to change posting time, how to update topics, what to do if a day is skipped Checkpoint — Approver sends one Telegram message and sees the post go live on LinkedIn and Instagram. No further manual steps required.

05 · ONGOING COSTS

Ongoing Platform Costs

After delivery, the system runs on two tools. n8n is self-hosted on a VPS (Hostinger or Namecheap, approximately \$3-6 per month). Upload-Post handles LinkedIn and Instagram publishing at the existing plan rate. Groq API is free with no monthly cost at this volume. Total ongoing cost after delivery: approximately \$3-6 per month.

SERVICE	MONTHLY ESTIMATE
n8n — self-hosted on VPS (Hostinger or Namecheap)	\$3-6 / month
Groq API — AI content generation (Llama 3.3 70B)	Free
Upload-Post — LinkedIn + Instagram publishing	Existing subscription
Telegram Bot	Free
Total ongoing cost	~\$3-6 / month

06 · INVESTMENT

Investment

Full Phase 1 build: n8n workflow, Groq integration, Telegram approval bot, 9-topic rotation, CTA logic, LinkedIn + Instagram publishing, 2-week delivery, system documentation	\$500	Phase 1 Build — \$500
--	-------	-----------------------

Phase 1 delivers a fully working system. After handoff, the only ongoing cost is the VPS at \$3-6 per month. No per-post charges, no API subscription fees, no hidden costs at this posting volume.

PAYMENT TERMS

50% before build begins. 50% on delivery of live system with both platforms publishing. No payment is due for work not delivered.

07 · NEXT STEP

What I Need From You

- n8n instance access — VPS server credentials or existing n8n login to build on
- Upload-Post API key — for LinkedIn and Instagram publishing nodes
- Telegram account — for bot setup and approval flow configuration
- Instagram Business account linked to a Facebook Page — required by Instagram API for publishing
- Contact form URL from revampconsult.com — for CTA links inside generated posts
- Confirmation of 9AM posting time or preferred alternative
