

// Technical Proposal + Pricing

AI Video Automation System

PHASE 1 End-to-End Build: Script to Published Video

PREPARED FOR	DATE	DOCUMENT TYPE	STATUS
Jang	19 July 2026	Technical Proposal + Pricing	Ready for Review

– 01 • OVERVIEW

What This Proposal Covers

You sell prescription safety and sports glasses and run ad campaigns on Facebook and Instagram. Right now, getting a video made means briefing someone, waiting, reviewing, revising, then manually uploading. That process costs time and money every single cycle, and it limits how often you can refresh your creative.

Ad performance degrades when the same creative runs too long. Two to three new videos per month is the minimum to keep campaigns from going stale. But doing that manually, month after month, is not sustainable.

This build replaces that process entirely. You submit a product and talking points once. The system writes the script, generates the video, and publishes it to your Facebook and Instagram automatically. No editor. No briefing calls. No manual uploads. The same output you are getting now, running without you.

– 02 • THE PIPELINE

How the System Works — End to End

- 01

PRODUCT INTAKE

You open a form, fill in the product name, key talking points, and upload a product photo. That single submission triggers the entire pipeline. Nothing else is needed from you until the video is live.

Tally FormProduct Photo Upload
- 02

AI SCRIPT GENERATION

Claude AI generates an optimized ad script from your talking points. Structured for short-form video: hook, product features, call to action. The script is engineered to sound like a person who knows the product, not a generic ad voice.

Claude AIShort-Form Ad Script
- 03

VIDEO SCENE GENERATION

Kie AI uses Google's Veo 3.1 model to generate dynamic footage of athletes and lifestyle scenes featuring your glasses. Each scene is generated from the script. The system polls for completion and automatically retries any scene that fails, so nothing is ever silently lost.

Kie AIVeo 3.1Async Retry Logic
- 04

VIDEO ASSEMBLY

All generated scenes are assembled into a single finished video with captions, branded overlays, and your logo. Output is formatted for both Facebook feed and Instagram Reels in a single render pass.

Creatomate9:16 + Square FormatsBrand Overlays
- 05

AUTO-PUBLISHING

The finished video is pushed directly to your Facebook Page and Instagram account with platform-optimized captions. No manual upload. The post goes live automatically once assembly is confirmed complete.

BlotatoFacebookInstagram
- 06

DELIVERY NOTIFICATION

You receive a branded email confirming the video is live, with direct links to each published post. If anything fails at any stage, a separate error alert fires with the exact failure details so nothing disappears quietly.

Gmail AlertsSuccess + Error NotificationsGoogle Sheets Log

What Happens When Something Breaks

API-dependent pipelines fail. The question is whether failures are silent or handled. This system is built for the second.

- ✔

Scene-level retry logic. If Kie AI fails to generate a scene, the system retries automatically up to three times before flagging it. A single failed scene does not kill the entire video run.
- ⚙️

Async polling, not blind waiting. Video generation is asynchronous — the system checks every 30 seconds and continues only when each scene is confirmed complete. No timeouts, no guessing.
- 📧

Error alerts with full context. If any part of the pipeline fails, you receive an email with the exact node that failed and a direct link to the execution. You never wonder what went wrong or where.
- 📋

Full run log in Google Sheets. Every pipeline run is tracked: scenes generated, video URLs, assembly status, publish confirmation. You can check any past run at any time without opening n8n.

– 03 • SCOPE

What I'll Build

PLATFORM TOOLS — WHAT EACH ONE DOES

Eight tools, each with a single defined role. You only interact with one of them: the intake form. Everything else runs in the background.

TOOL	ROLE	WHO PAYS
Tally	Product intake form	Free tier
n8n	Pipeline orchestration	~\$20/mo or self-hosted free
Claude AI	Script generation	Pay-per-use, minimal
Kie AI (Veo 3.1)	Video scene generation	~\$3-8 per video
Creatomate	Video assembly + captions	~\$29/mo
Blotato	Facebook + Instagram publishing	~\$29/mo
Google Sheets	Run tracking and logging	Free
Gmail	Success and error alerts	Free

INTENTIONALLY DEFERRED

FEATURE	REASON
Meta Ads Manager campaign setup	Out of scope. Jang manages his own ad spend and targeting.
Content strategy and posting schedule	Out of scope for Phase 1. The system posts on demand, not on a fixed calendar.
Additional platforms beyond Facebook + Instagram	Available as a Phase 2 add-on. Blotato supports TikTok, YouTube Shorts, and more.

Platform accounts (Kie AI, Creatomate, Blotato, n8n) are registered in your name and paid directly by you after delivery. Running cost is approximately \$80 to \$100 per month at 2 to 3 videos, scaling only with volume. There is no ongoing fee to me beyond the monthly maintenance retainer.

– 04 • TIMELINE

Milestone Breakdown

- MILESTONE 1

Intake + Script Pipeline Live
 - Tally intake form built and connected to n8n
 - Claude AI script agent configured for glasses and eyewear content
 - First script generated from your talking points and reviewed together
 - Google Sheets tracking sheet initialized

Checkpoint — You submit a product, a script comes out the other end. Approved together before any video generation begins.
- MILESTONE 2

First Full Video Generated
 - Kie AI video generation wired into the pipeline with async polling and retry logic
 - Creatomate assembly configured with your brand assets and logo
 - First complete video rendered, reviewed, and approved
 - Format confirmed for Facebook and Instagram

Checkpoint — A finished, publish-ready video exists. You have seen exactly what the system produces before anything goes live.
- MILESTONE 3

Live Publishing + Full Handoff
 - Blotato connected to your Facebook Page and Instagram account
 - Auto-publishing live and confirmed with a test run
 - Success and error email alerts active
 - Full system handoff: documentation, form link, sheet access, all credentials in your name

Checkpoint — The system runs end to end without you. Submit a product, video goes live on Facebook and Instagram automatically.

– 05 • ONGOING COSTS

Ongoing Platform Costs

All platform accounts are set up in your name so you own everything outright. If you ever want to move to a different developer or manage it yourself, every account, credential, and workflow is yours. Nothing is locked to me.

SERVICE	MONTHLY ESTIMATE
Milestone 1 — Intake + Script Pipeline	\$600
Milestone 2 — Video Generation + Assembly	\$525
Milestone 3 — Publishing + Handoff	\$375
Total Build Fee	\$1,500
Monthly Maintenance Retainer (from Month 2)	\$150/mo

– 06 • INVESTMENT

Investment

Full Build	\$1,500	Full Automation Build
------------	---------	-----------------------

Each milestone is paid on delivery and approval of that milestone's output, not upfront. You only pay for what you have already seen working.

PAYMENT TERMS

Milestone 1: \$600 on delivery and approval of first script. Milestone 2: \$525 on delivery and approval of first full video. Milestone 3: \$375 on confirmed live publish to Facebook and Instagram. Monthly maintenance: \$150/month from Month 2 onward.

– 07 • NEXT STEP

What I Need From You

- ☐ Product photos of the glasses (at least one per video run)
- ☐ Talking points or key messages per video (bullet points are enough)
- ☐ Logo file and brand colors for overlays
- ☐ Facebook Page and Instagram Business account login (for Blotato connection)
- ☐ Confirmation of whether you want to approve each video before it posts, or fully automatic
